

Demo Casino Guidebook

Creating players

The trick to cheat the player on the demo wallet is to pass a key in this format:

```
{nativeId}:{balance}:{currency}:{jurisdiction}:{country}:{brand}:{nickname}
```

so for example will launch a player `my-native-id`

```
my-native-ideureur::my-brand
```

Clearing old players

Due to potential large amount of anonymous players that can be created there is cron task which removes players created more than 48 hours ago.

Delaying request in load testing

In the load testing you may want to simulate response time from external wallets. To achieve that you can set `REQUEST_DELAY` to delay all wallet responses
